PROFESSIONAL SUMMARY

Backend-focused Software Engineer with 3+ years of experience building REST APIs and production backend services using Node.js, TypeScript, Express.js, MongoDB, and MySQL. Experienced in payment integrations, JWT authentication, RBAC, asynchronous processing, AWS, API optimization, and CI/CD.

TECHNICAL SKILLS

Languages & Web Technologies: JavaScript (ES6+), TypeScript, Java, HTML5, CSS3

Backend Development: Node.js, Express.js, REST APIs, Microservices, API Integration, NPM, Axios, JWT, RBAC

Frontend Development: React.js, Vite, Context API, React Hooks, Tailwind CSS, Styled Components

Databases: MongoDB, MySQL, SQL, Redis

Cloud, DevOps & Tools: AWS, SQS, Lambda, S3, Docker, GitHub Actions, GitHub, GitLab, CI/CD, MobaXterm, FileZilla

AI Technologies: ChatGPT, Claude, Gemini, OpenAI API

IDEs & Development Tools: VS Code, IntelliJ IDEA, Sublime Text, phpMyAdmin

Other Tools: Postman, Jira, Confluence

WORK EXPERIENCE

Linkapi Tech Pvt Ltd

Jun 2025 – Jul 2026

Software Engineer

- Designed and developed scalable backend services using Node.js, TypeScript, and Express.js, implementing asynchronous processing, request validation, centralized error handling, and production-ready REST API architecture.
- Developed Jio Pay payment processing workflows using Node.js and MySQL, implementing retry mechanisms, audit logging, failure handling, and reliable transaction processing for secure and resilient payment operations.
- Implemented AWS SQS for asynchronous and decoupled message processing and developed secure REST APIs using JWT authentication, RBAC authorization, request validation, and middleware-based access control.
- Optimized MongoDB queries, indexing, and database operations and implemented AWS Lambda, S3, and CloudWatch for serverless processing, cloud storage, application logging, monitoring, and backend operations.
- Integrated OpenAI API into production backend workflows for intelligent response generation and contributed to API integration, debugging, testing, deployment, monitoring, and production support.

Swavish Software

May 2024 – May 2025

Software Engineer

- Developed and maintained scalable backend services and REST APIs using Node.js, Express.js, and MongoDB, implementing business logic, API validation, centralized error handling, database operations, and production-ready backend solutions for enterprise applications.
- Integrated Razorpay and Stripe payment gateways using webhooks and idempotent event processing, handling payment callbacks, transaction states, payment verification, failure scenarios, and reliable backend payment processing.
- Designed reusable and modular backend components and integrated third-party APIs using clean code principles, asynchronous programming, RESTful API design, and maintainable software architecture practices.
- Containerized backend applications using Docker and automated build, testing, and deployment workflows using GitHub Actions and CI/CD pipelines, supporting consistent and reliable application delivery.

Maxtra Technologies Pvt Ltd

Aug 2023 – Feb 2024

Software Engineer

- Developed Node.js backend services and scalable REST APIs using Express.js and MongoDB, implementing business logic, backend workflows, database operations, API validation, and third-party API integrations for production applications.
- Optimized MongoDB queries, indexing strategies, and database operations and refactored synchronous I/O using async/await and connection pooling to improve API performance, scalability, resource utilization, and application stability.
- Implemented middleware-based request validation, centralized error handling, API debugging, and REST API testing while supporting application deployment, production troubleshooting, issue resolution, and backend maintenance.

Singsys Software Services Pvt Ltd

Aug 2022 – Aug 2023

Software Development Engineer Intern

- Developed RESTful APIs using Node.js, Express.js, and MongoDB, implementing backend business logic, database operations, request handling, API validation, and third-party payment gateway integrations for production applications.
- Implemented NodeMailer-based email notification workflows and developed reusable backend modules for user management, data processing, and application workflows following modular architecture, clean code, and maintainable development practices.
- Performed REST API testing, debugging, application deployment, and production support, troubleshooting backend issues, resolving application errors, and collaborating with team members to maintain system reliability and functionality.

PROJECT

URL Shortener Application

- Built a scalable URL shortening service using Node.js, Express.js, MongoDB, and Redis, supporting custom aliases, collision-safe short codes, optimized database indexing, URL redirection, and click analytics.
- Designed and implemented RESTful APIs with request validation, centralized error handling, rate limiting, and modular backend architecture for secure and reliable URL management.
- Implemented JWT authentication and RBAC for secure access control and integrated Redis caching to improve frequently accessed URL lookup and redirection performance.
- Automated application build and deployment using GitHub Actions and CI/CD pipelines, supporting consistent deployment and maintainable backend delivery.

EDUCATION

Dr. A.P.J. Abdul Kalam Technical University, India

Jul 2018 – Jun 2022

Bachelor's Degree, Computer Science

CGPA: 7.82/10
